Secure Browser

PSI | Testing Excellence

PSI does not officially support the Enterprise versions of Windows, as those were specifically designed to be used in corporate environments, requiring elevated security to protect corporate assets and intellectual property.

This further manifests as configuration options like Group Policies and Firewall and Proxy setups that can restrict or prevent the installation, running, and/or connections to outside resources required to use PSI Secure Browser.

If you intend on using PSI Secure Browser using the Enterprise versions of Windows in this type of environment, please use the following information to consult with your IT group so that they can ensure that the necessary permissions, ports, and external resources are configured in your environment to be able to support it.

- **Ability to install the PSI Secure Browser**
- **Ports required:**
  - HTTP (80)
  - HTTPS (443)
- **Destinations required:**
  - Twilio
  - Ably
  - AWS: *.aws.amazon.com
  - PSI: *.psiexams.com
